Profile

Software Developer with hands-on experience building Full-Stack applications and AI-powered solutions. Combines analytical thinking and strong self-learning skills with a solution-oriented approach, covering the entire development lifecycle — from problem analysis and logic design to implementation, API and database integration, and production deployment. Experienced in personal and academic projects, as well as hackathon participation, including reaching the finals of an AI hackathon.

Practical experience | Projects

Phoenix RAG AI Chatbot | Hackathon Project – Finalist, 2026

- Independently developed a Hebrew-language chatbot that answers natural-language questions based exclusively on publicly available content from the Phoenix website.
- Designed and implemented a content-processing pipeline, including website crawling, data cleaning, chunking, and search index construction.
- Implemented information retrieval using BM25, result reranking with Cohere Rerank, and source-grounded answer generation using Gemini.
- Built a Python FastAPI backend, integrated source citations, and implemented safeguards against unsupported or fabricated answers.

Smart Parent-Teacher Meeting Scheduler | Academic Project – Individual Development

- Developed a Full-Stack system for managing and scheduling parent-teacher meetings, designed to reduce waiting times and streamline school administrative workflows.
- Implemented a scheduling algorithm that accounts for siblings attending different classes, ensuring consecutive appointments for the same parent.
- Incorporated urgent availability constraints and generated organized, print-ready meeting schedules grouped by class.
- Developed a REST API and a React + TypeScript interface, including user authentication and role-based access control.

Calories Calculator – Nutrition Tracking Application | Academic Project – Team of 2

- Developed a Hebrew-language Full-Stack application for calorie tracking, goal management, and system interactions through an AI assistant.
- Responsible for authentication, user management, and infrastructure, as well as end-to-end development of an AI assistant using Gemini Function Calling.
- Integrated the assistant with real application actions, including product search, adding and removing items from the cart, product creation, and daily summaries.
- Worked with a database of approximately 550 food products, user and administrator permissions, and historical data visualization through charts.

Technical Skills

- **Programming Languages:** Python, Java, C, C++, C#, JavaScript, TypeScript, Assembly.
- **Frameworks & Development Technologies:** React, Angular, Vue, Node.js, Express, FastAPI, ASP.NET Core, .NET, WPF, Entity Framework.
- **Databases:** SQL Server, MongoDB, SQLite.
- **AI & RAG:** BM25, Gemini API, Function Calling, Cohere Rerank, Cursor, GitHub.
- **Tools & Environments:** Linux, Windows, Docker, Railway, Render, Netlify.

Education

Practical Software Engineering Diploma | MAHAT-accredited institution | 2024–2026
Additional Training: Advanced courses through KamaTech, including Cybersecurity and Information Security.

Languages - **Hebrew:** Native speaker. **English:** Good proficiency.
