Rachel Feuchtwanger Software Engineer

GitHub | 058-3215063 | rachelf.dev@gmail.com

Profile

Software Engineer with analytical thinking, end-to-end project leadership capabilities, and rapid self-learning skills. Possesses practical experience in developing complex systems, writing clean and modular code, working with REST APIs and databases, and integrating advanced technologies and AI tools to accelerate development workflows. Excels at technical problem-solving, possesses excellent interpersonal skills, and thrives in team environments.

Selected Projects

2026 | Smart Parent-Teacher Meeting Management & Scheduling System

- **Architecture & Full-Stack:** End-to-end Full-Stack platform development using **React** and **C# .NET Core**, implementing RESTful APIs.
- **Logic & Data Processing:** Developed a smart decision-making algorithm for automated one-click scheduling, replacing complex manual workflows.
- **Databases & Security:** Relational database schema design in **SQL Server,** alongside secure authentication and authorization mechanisms using JWT and BCrypt.

2026 | Specialization in Cybersecurity Implementation and Defense

- **Real-Time Monitoring & Defense:** Monitoring network traffic, analyzing security incidents, and implementing defense mechanisms against threats and attacks.
- **Security by Design:** Integrating security controls and risk management from the system design phase to protect sensitive data.

2026 | Calorie Calculation Application

- **Architecture & Full-Stack:** End-to-end web application development using **Angular** for the client side and **Node.js** for the server side.
- **Logic & Data Processing:** Implemented dynamic daily data calculation logic with an emphasis on high performance and smooth user experience.
- **Databases & Security:** Managed **MongoDB** database integration with secure data persistence.

2025 | Interactive Game Development

- Designed an engaging and interactive gaming experience focusing on game logic and user experience using **JavaScript**, **CSS**, and **HTML**.

Technical Skills

Programming Languages: Python, Java, C, C++, C#, Assembly

Web Technologies: TypeScript, JavaScript, CSS, SCSS, HTML, Vue, React, Angular 17, Bootstrap

Databases: MongoDB, SQL Server

Technologies: Node.js, WPF, .NET Core, Entity Framework, Web API, XML

Data Science & Machine Learning: Machine Learning, Computer Vision, Deep Learning, Scikit-learn, NumPy, Pandas, Matplotlib

Tools & Systems: GitHub, Linux, Arduino, Windows, AI Tools (Copilot, Cursor, ChatGPT, Claude, Gemini)

Core CS & Topics: Data Structures & Algorithms, Operating Systems, Digital Systems, Computer Communications, Discrete Mathematics, Probability & Statistics, OOP, AI Coding

Education

2024 – 2026 | Software Engineering Studies – On behalf of MAHAT

- **Specialization:** Studies focused on Full-Stack development using advanced technologies and managing complex databases.
- **Additional Training:** Advanced extension courses via Kama-Tech, Cybersecurity & Information Security course.

Languages - **Hebrew:** Native speaker. **English:** Good proficiency.
